

Nana Performance Summary

P.J.Maker

December 28, 2014

This document contains some measurements for the space and time costs for the nana library. Data provided includes:

- Time cost in ns.
- Space in bytes.
- Generated assembler code.
- Results for various compiler options such as optimisation.

These test results were generated using:

- Operating System, release and cpu: Linux 3.13.0-43-generic x86_64
- CPU speed is analysed by the supplied `bogomips` program which gives a value of 945.2..995.9 BogMips . Bogomips (bogus millions of instructions per seconds) are a standard unit of measure invented by Linus Torvalds for use in Linux. They represent something vaguely related to the number of instructions executed per second.
- Note: nana should be installed using `I_DEFAULT=fast ./configure` for these measurements.

The following table contains a summary of the results:

Code	Size	Time	Options
-0			
-0			
-0			
-0			
-0			
-0			
-0			
-0			
-0			
-0			

Note:

- `assert()` is your systems standard assert macro.
- `TRAD_assert()` is the traditional implementation of assert which calls `fprintf()` and `exit()` directly.
- `I()` is the nana equivalent of `assert`.

- `DI()` is implemented using the debugger. It is very space efficient but takes longer than inline C code (such as `I()`).
- `I(A(...))` is checking that all 10 values in the array `a` are positive.
- `now()` measures the current time and returns a —double— value.
- `L()` optionally prints a debugging message.
- `DL()` is the debugger equivalent of `L()`.

Note that measurement code depends on GNU CC extensions and is not a thing of great beauty.

1 How was it measured?

See `Makefile.am` and `measure.sh` for the true story, a quick summary would be:

- The code fragments are stored one per line in a file such as `summary.tst`.
- The `measure.sh` program takes as arguments a set of compiler flags such as `-O` which are used for each line in the input file.
- The code fragment is copied 256 times by a macro inside a loop which in turn executes 1024 times. For small examples it is expected that the entire loop will fit inside the cache.
- Time is measured using the nana `now()` function.

The variables and code fragments used defined in `prelude.c` and `postlude.c`. All variables are declared `volatile` to prevent the compiler optimising access to variables.

In addition all programs are compiled with the following options:

- `-g` – debugger information is always turned on since we need it for parts of the nana library. Note that `gcc` happily optimises code with `-g` enabled.
- `-fno-defer-pop` – `gcc` by default only pops arguments off the stack after a number of calls. This option causes each call to immediately pop its arguments off the stack.

2 Detailed results

This section contains some more detailed results.

2.1 Assert

Code	Size	Time	Options
<code>assert(i >= 10);</code>	28	1ns	-O0
<code>assert(i >= 10);</code>	29	1ns	-O1
<code>assert(i >= 10);</code>	13	0ns	-O3
<code>BSD_assert(i >= 10);</code>	28	1ns	-O0
<code>BSD_assert(i >= 10);</code>	4	0ns	-O1
<code>BSD_assert(i >= 10);</code>	4	0ns	-O3
<code>TRAD_assert(i >= 10);</code>	59	1ns	-O0
<code>TRAD_assert(i >= 10);</code>	63	1ns	-O1
<code>TRAD_assert(i >= 10);</code>	13	0ns	-O3
<code>I(i >= 10);</code>	28	1ns	-O0
<code>I(i >= 10);</code>	29	1ns	-O1
<code>I(i >= 10);</code>	13	0ns	-O3
<code>DI(i >= 10);</code>	10	13.5us	-O0
<code>DI(i >= 10);</code>	10	13.3us	-O1
<code>DI(i >= 10);</code>	10	13.4us	-O3

2.2 Quantifiers

Code	Size	Time	Options
<code>I(A(char *p = str, *p != '\0', p++, islower(*p)));</code>	130	46ns	-O0
<code>I(A(char *p = str, *p != '\0', p++, islower(*p)));</code>	50	13ns	-O1
<code>I(A(char *p = str, *p != '\0', p++, islower(*p)));</code>	69	9ns	-O3
<code>I(A(int i = 0, i < 10, i++, E1(int j = 0, j < 10, j++, a[i] == a[j])));</code>	174	418ns	-O0
<code>I(A(int i = 0, i < 10, i++, E1(int j = 0, j < 10, j++, a[i] == a[j])));</code>	84	125ns	-O1
<code>I(A(int i = 0, i < 10, i++, E1(int j = 0, j < 10, j++, a[i] == a[j])));</code>	220	76ns	-O3

2.3 Log

Code	Size	Time	Options
printf("helloworldn");	15	-O0	
printf("helloworldn");	20	-O1	
printf("helloworldn");	-4529	-O3	
L("helloworldn");	30	-O0	
L("helloworldn");	27	-O1	
L("helloworldn");	-7089	-O3	
DL("helloworldn");	10	2.9us	-O0
DL("helloworldn");	10	2.9us	-O1
DL("helloworldn");	10	2.9us	-O3
gi = 0; LG(gi & 0x10, "helloworldn");	53	1ns	-O0
gi = 0; LG(gi & 0x10, "helloworldn");	47	1ns	-O1
gi = 0; LG(gi & 0x10, "helloworldn");	24	0ns	-O3
gi = ~0; LG(gi & 0x10, "helloworldn");	53	-O0	
gi = ~0; LG(gi & 0x10, "helloworldn");	47	-O1	
gi = ~0; LG(gi & 0x10, "helloworldn");	24	-O3	
LHP(fprintf,log,"helloworldn");	27	26ns	-O0
LHP(fprintf,log,"helloworldn");	23	27ns	-O1
LHP(fprintf,log,"helloworldn");	-6065	26ns	-O3
LHP(L_buffer_printf,buf,"helloworldn");	22	78ns	-O0
LHP(L_buffer_printf,buf,"helloworldn");	18	74ns	-O1
LHP(L_buffer_printf,buf,"helloworldn");	-4014	72ns	-O3
LHP(syslog,LOG_USER,"helloworldn");	20	3.5us	-O0
LHP(syslog,LOG_USER,"helloworldn");	25	3.9us	-O1
LHP(syslog,LOG_USER,"helloworldn");	-5809	3.6us	-O3

2.4 Nop

Code	Size	Time	Options
asm("");	0	0ns	-O0
asm("");	0	0ns	-O1
asm("");	0	0ns	-O3
asm("nop");	1	0ns	-O0
asm("nop");	1	0ns	-O1
asm("nop");	1	0ns	-O3
asm("nop;nop;");	2	0ns	-O0
asm("nop;nop;");	2	0ns	-O1
asm("nop;nop;");	2	0ns	-O3
asm("nop;nop;nop;");	3	0ns	-O0
asm("nop;nop;nop;");	3	0ns	-O1
asm("nop;nop;nop;");	3	0ns	-O3

asm("nop;nop;nop;nop;nop;");	5	0ns	-O1
asm("nop;nop;nop;nop;nop;");	5	0ns	-O3

2.5 C Operations

Code	Size	Time	Options
i = 4;	7	0ns	-O0
i = 4;	8	0ns	-O1
i = 4;	8	0ns	-O3
gi = 11;	10	0ns	-O0
gi = 11;	10	0ns	-O1
gi = 11;	10	0ns	-O3
f = 12.0;	9	0ns	-O0
f = 12.0;	14	0ns	-O1
f = 12.0;	8	0ns	-O3
gf = 12.0;	12	0ns	-O0
gf = 12.0;	16	0ns	-O1
gf = 12.0;	10	0ns	-O3
i++;	9	2ns	-O0
i++;	11	2ns	-O1
i++;	11	2ns	-O3
gi++;	15	2ns	-O0
gi++;	15	2ns	-O1
gi++;	15	2ns	-O3
j = a[i];	15	0ns	-O0
j = a[i];	17	1ns	-O1
j = a[i];	16	0ns	-O3

2.6 Data cache testing

These are just some tests using a large array which should hopefully exceed the size of the D-cache on your machine.

Code	Size	Time	Options
-DNT=16			

3 Code

This section contains a listing of all the generated code fragments.

- `printf("helloworldn");` with `gcc -g -O0` produces:

```

        .loc 1 119 0
#NO_APP
movl    $.LC4, %edi
movl    $0, %eax
call   printf
        .loc 1 120 0

```

- `printf("helloworldn");` with `gcc -g -O1` produces:

```
.LVL5:
#NO_APP
.LBB526:
.LBB527:
    .loc 2 104 0
    movl    $.LC4, %esi
    movl    $1, %edi
    movl    $0, %eax
    call    __printf_chk
.LVL6:
.LBE527:
.LBE526:
    .loc 1 120 0
```

- `printf("helloworldn");` with `gcc -g -O3` produces:

```
.LVL277:
#NO_APP
.LBB1050:
.LBB1051:
    .loc 2 104 0
    movl    $.LC4, %esi
    movl    $1, %edi
    xorl    %eax, %eax
    call    __printf_chk
.LVL278:
.LBE1051:
.LBE1050:
    .loc 1 120 0
```

- `L("helloworldn");` with `gcc -g -O0` produces:

```
    .loc 1 119 0
#NO_APP
    movq    stdout(%rip), %rax
    movq    %rax, %rcx
    movl    $11, %edx
    movl    $1, %esi
    movl    $.LC4, %edi
    call    fwrite
    .loc 1 120 0
```

- `L("helloworldn");` with `gcc -g -O1` produces:

```
.LVL5:
#NO_APP
.LBB526:
```

```

.LBB527:
    .loc 2 97 0
    movq    stdout(%rip), %rcx
    movl    $11, %edx
    movl    $1, %esi
    movl    $.LC4, %edi
    call    fwrite
.LVL6:
.LBE527:
.LBE526:
    .loc 1 120 0

```

- L("helloworldn"); with gcc -g -O3 produces:

```

.LVL277:
#NO_APP
.LBB1050:
.LBB1051:
    .loc 2 97 0
    movq    stdout(%rip), %rcx
    movl    $11, %edx
    movl    $1, %esi
    movl    $.LC4, %edi
    call    fwrite
.LVL278:
.LBE1051:
.LBE1050:
    .loc 1 120 0

```

- DL("helloworldn"); with gcc -g -O0 produces:

```

    .loc 1 119 0
#NO_APP
    movl    $0, _dl_target(%rip)
    .loc 1 120 0

```

- DL("helloworldn"); with gcc -g -O1 produces:

```

    .loc 1 119 0
#NO_APP
    movl    $0, _dl_target(%rip)
    .loc 1 120 0

```

- DL("helloworldn"); with gcc -g -O3 produces:

```

    .loc 1 119 0
#NO_APP
    movl    $0, _dl_target(%rip)
    .loc 1 120 0

```

- `gi = 0; LG(gi & 0x10, "helloworldn");` with `gcc -g -O0` produces:

```

        .loc 1 119 0
#NO_APP
        movl    $0, gi(%rip)
        movl    gi(%rip), %eax
        andl    $16, %eax
        testl   %eax, %eax
        je     .L5
        .loc 1 119 0 is_stmt 0 discriminator 1
        movq    stdout(%rip), %rax
        movq    %rax, %rcx
        movl    $11, %edx
        movl    $1, %esi
        movl    $.LC4, %edi
        call   fwrite
.L5:
        .loc 1 120 0 is_stmt 1

```

- `gi = 0; LG(gi & 0x10, "helloworldn");` with `gcc -g -O1` produces:

```

        .loc 1 119 0
